Switch on a doctor

DrQuick puts a GP on video within minutes of asking. The logo says that in one picture: a switch in the on position, with a plus in its knob.

The pill

Lime pills are the action on the site: every primary button, every selected state. In the logo, one holds "Quick".

The switch

On demand. There is no appointment to book, just a GP to switch on. The knob always sits at the right, in the on position.

The plus

Care, in the most widely understood sign there is. Rounded like the type, lime like the action.

Logo family

Five versions of one mark. Use the wordmark unless the space calls for another, and never place two versions side by side.

Wordmark **Primary**

The default everywhere there is room: the site header, email, documents, signage, press.

drquick-wordmark-*.svg

Horizontal lockup **Secondary**

Wide, short spaces where the symbol should lead: app store headers, partner lists, footers.

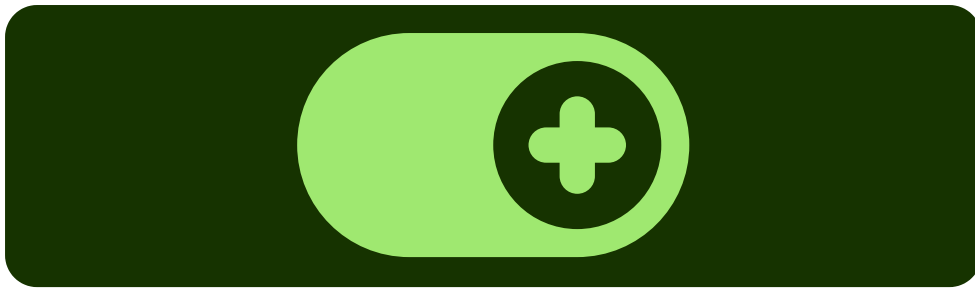

drquick-lockup-horizontal-*.svg

Stacked lockup **Secondary**

Square or tall spaces: posters, merchandise, event screens.

drquick-lockup-stacked-*.svg

Symbol **Supporting**

Only where the name is present nearby or the space is square: app icon, avatars, loaders.

`drquick-symbol-*.svg`

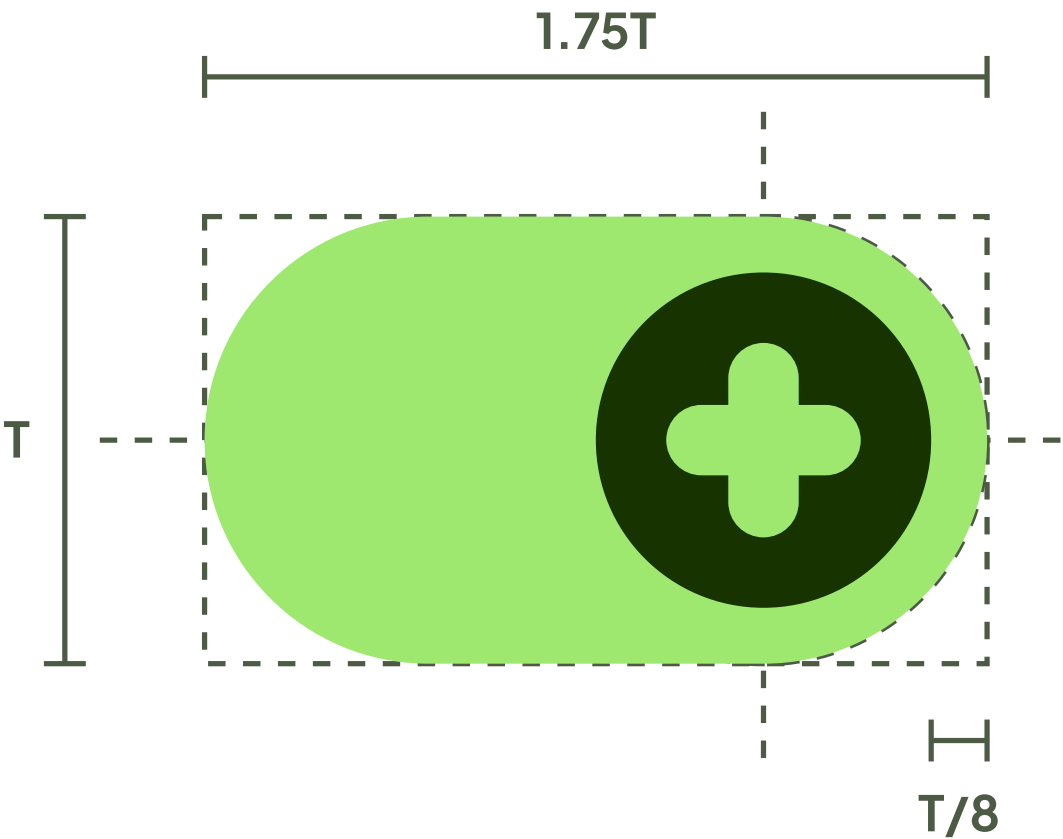

Knob **Small sizes only**

Below 24px, where the switch gets too thin: the favicon and tiny UI badges.

`drquick-knob-*.svg`

Construction

Every proportion comes from T, the height of the switch. Never redraw the mark by eye; the master SVGs are exact.

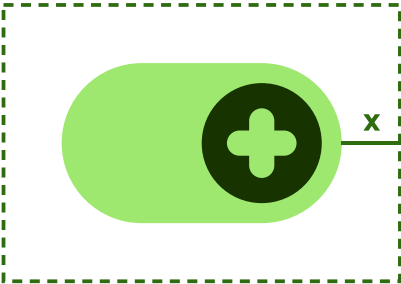

knob $r = 3T/8$ · plus arm $0.58r$ · bar $0.42r$

The numbers

Part	Size
Track	$1.75T \times T$, fully rounded
Knob inset	$T/8$ on every side
Knob radius	$3T/8$
Plus arm	$0.58 \times$ knob radius, from the centre
Plus bar	$0.42 \times$ knob radius, round ends
Wordmark pill	$1.57 \times$ the cap height of "Dr"
Lettering	Plus Jakarta Sans 800, $-0.04em$

Clear space and minimum size

The clear-space unit x is the knob's radius at whatever size the logo is set. Nothing enters that margin: no text, no edge, no other logo.

The same rule holds for the symbol, the lockups and the knob.

Minimum sizes

Version	Screen	Print	Smaller than that
Wordmark	96px wide	25mm wide	Use the symbol
Horizontal lockup	140px wide	35mm wide	Use the wordmark
Stacked lockup	64px tall	18mm tall	Use the symbol
Symbol	28px wide	8mm wide	Use the knob
Knob	16px	4mm	Don't go smaller

Colour

Two colours carry the logo. Forest is the one dark, for text and for the fill that lands the point. Lime is the action. The rest are grounds.

Forest

HEX #163300
RGB 22 51 0
CMYK 57 0 100 80

Lime

HEX #9FE870
RGB 159 232 112
CMYK 31 0 52 9

White

HEX #FFFFFF
RGB 255 255 255
Paper white

Lime ink

HEX #2F6B0F
RGB 47 107 15
Lines and text only

Grounds

Ground
#F5F7F2

Lime-wash
#E2F6D5

Sage
#C9DDB8

Stone
#E8E5DB

Quiet
#EDF1E8

Balance in a layout

Grounds 60%

Forest 30%

10%

Lime is the action, so keep it scarce: about a tenth of any layout. When everything is lime, nothing stands out.

Rules

- Lime is a fill, never text or a line on a light ground, where it has only 1.4:1 contrast with white. Use lime ink for anything that must be read.
- Forest is the only dark. Never use true black, except in the black single-colour logo.
- NHS blue and NHS green, and anything near either, are banned so a private service never reads as the NHS.
- The CMYK values are straight conversions. Set Pantone references from a press proof before the first print run.

Colourways, single colour, black and white

Every version of the logo comes in six colourways. The single-colour versions knock "Quick" and the knob out of the pill and keep the plus solid, so the mark reads in one ink.

Backgrounds

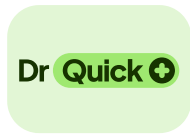

The colour logo works on every light brand ground. On forest, use the reversed version. On lime, use forest single colour, because a lime pill disappears into a lime ground.

✓ White

✓ Ground

✓ Lime-wash

✓ Sage

✓ Stone

✓ Forest, reversed

✓ Lime, forest single
colour

✗ Lime, colour version

✗ Forest, colour version

✗ Mid-tone ground

On photography, set the logo on a forest or white tile at the image's edge, never on the image itself. On a partner's colour, use black or white single colour.

App icon

A forest square with the lime switch across 76% of its width. Supply the square, full-bleed artwork; iOS and Android cut their own corners.

On a home screen

iOS, 60pt

40pt

29pt

Android

Specifications

Platform	What to supply	File
iOS (Xcode 14+)	One opaque 1024 x 1024 PNG with no transparency and no corners	app-icon/ios/AppIcon.appiconset/
iOS, older targets	20, 29, 40, 58, 60, 76, 80, 87, 120, 152, 167 and 180px	app-icon/ios/sizes/
Android 8+	Adaptive icon: forest background colour, 108dp foreground inside the 66dp safe zone, monochrome layer for themed icons	app-icon/android/res/
Android, legacy	Square and round launcher icons, mdpi to xxxhdpi	res/mipmap-*/
Google Play	512 x 512 PNG, full bleed	android/play-store-512.png
Expo / React Native	Icon, adaptive foreground and monochrome, splash icon, app.json snippet	app-icon/expo/

Don't add a name, a badge, a gloss or a second colour to the icon. The icon uses the symbol, not the knob: at app-icon sizes the switch is legible, and it is the distinctive part.

Favicon and web

At 16 to 48px the switch is too thin to read, so the favicon is the knob alone: a forest disc with a lime plus, on a lime tile.

In a browser tab

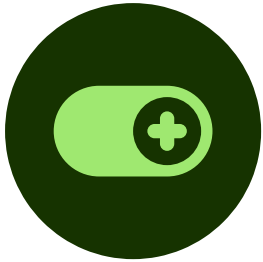

Add this to the site's <head>

```
<link rel="icon" href="/favicon.ico" sizes="48x48">
<link rel="icon" href="/favicon.svg" type="image/svg+xml">
<link rel="apple-touch-icon" href="/apple-touch-icon.png">
<link rel="mask-icon" href="/safari-pinned-tab.svg" color="#163300">
<link rel="manifest" href="/site.webmanifest">
<meta name="theme-color" content="#163300">
```

File	Use
favicon.ico	16, 32 and 48px, for every browser
favicon.svg	Sharp at any size in modern browsers
apple-touch-icon.png	180px, opaque, for iOS home screens
android-chrome-192/512.png , maskable-512.png	Installed web-app icons, listed in site.webmanifest
safari-pinned-tab.svg	Single-colour knob for Safari pinned tabs

Social

Profile pictures use the symbol on forest, sized to survive a circular crop. Link previews use the reversed wordmark and one plain line.

`social/avatar-1024.png` is the profile picture for every platform.

Dr **Quick** 

See a GP in minutes

`social/og-image-1200x630.png` is for Open Graph and X cards. `social/email-signature-600.png` is the wordmark on white for email signatures; display it at 200px wide.

Typography

One family everywhere: Plus Jakarta Sans. It is free under the SIL Open Font License, which allows logo use, and it is the face the wordmark is drawn from.

Display · 800
-0.035em

See a GP in minutes

Heading · 700
-0.02em

A GP on video, from home

Body · 400
16px / 1.5

Tell us what's wrong, see the full price up front, and we'll match you with a GP who is online now.

Small · 400
13px

If it's an emergency, call 999 or go to A&E.

Rules

- Use weights 400, 500, 700 and 800. Nothing lighter.
- Headlines are 800 with tight tracking. Body text stays at normal tracking.
- Never set the name in type in place of the logo. In running text, write it as one word: DrQuick.
- Fallback: system-ui, then the platform sans.

Motion

The logo has one move: the knob slides from off to on, with a small overshoot. Use it once, at an app launch, on a splash screen or when a page loads, and never on a loop.

Timing

Property	Value
Travel	From the left end of the track to the right: 0.75T
Duration	420ms
Easing	<code>cubic-bezier(.34, 1.36, .64, 1)</code>
Reduced motion	Show the finished logo with no movement

In brand motion the knob never slides back to off.

Using the logo responsibly

DrQuick is a regulated healthcare service. Whatever sits next to the logo is held to the same rules as the site.

Price and speed

- Never pair the logo with price urgency: no "surge", no countdowns, no "busy now, book before it rises". The ASA has ruled time-pressure pricing in medical ads socially irresponsible.
- Keep speed claims plain. "See a GP in minutes" is fine.
- Any price shown near the logo is the full, all-inclusive price.

Claims

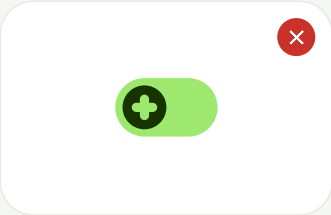

- Until registration is granted, the only permitted CQC wording is "CQC-registered clinical service at launch". Never place a CQC mark near the logo before then.
- Never put medicine names, pills or prescriptions next to the logo, and never suggest that a consultation guarantees a prescription.
- DrQuick launches in England only. Don't pair the logo with UK-wide claims.

Misuse

If a use isn't shown in this guide, ask before you publish it.

Stretch, squash or skew it.

Flip the switch. The plus always sits on the right, in the on position.

Recolour it. Only forest, lime and white. NHS blue and NHS green, and anything near either, are banned.

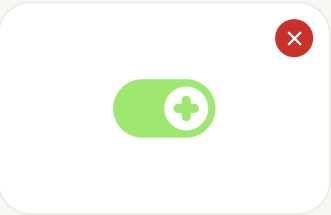

Rotate it or set it on a curve.

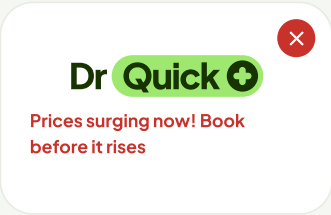

Add shadows, glows, gradients, bevels or outlines.

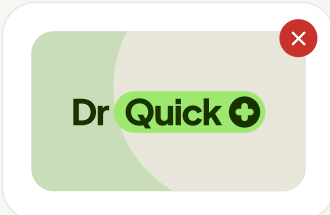

Retype it or split the name into two words. Always place the artwork file.

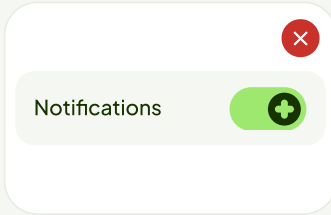

Rebuild or recolour the parts: the knob is forest and the plus is lime.

Put it next to price urgency, countdowns or "busy now" language.

Set it straight on a photograph. Put it on a forest or white tile.

Use the symbol as a working switch in the product UI.

Crowd it. Keep the clear space free of text and edges.

Set "Dr" in lime. On a light ground lime is a fill, never text.

Files

Everything lives in `Branding/`. SVG is the master for every logo. PNGs come at 1000px and 4000px on the long edge, with transparent backgrounds.

Which file?

- Web and apps: SVG.
- Slides, documents and email: PNG at 1000px.
- Print and signage: SVG, or PNG at 4000px if the printer can't take vectors.
- Embroidery and engraving: a single-colour SVG.
- To change anything, edit `src/build.py` and run it again. Never edit an exported file by hand.
